SUMMARY

Third-year Computer Engineering student who takes products from idea to production with an AI-first workflow: I build with agentic coding tools (Claude Code, Gemini) and put automated checks around AI-generated output before it ships. Built a creator campaign marketplace, a Flutter app on Google Play, and a data pipeline tracking 450+ gaming YouTube channels. Highly interested in games and a lifelong board gamer (3rd place at an Ankara Catan tournament), eager to turn product ideas into features real players use.

EDUCATION

Ankara University — *B.Sc. Computer Engineering (English-medium)* 2023 – Expected Jun 2028
GPA 3.69 / 4.00 · includes one-year English preparatory program

Ankara Keçiören Science High School 2019 – 2023

EXPERIENCE

Software Intern (C#, .NET) — *İş Yazılım* Jul – Aug 2025

- Rebuilt object-oriented programming fundamentals and .NET architecture under a mentor's guidance; applied SOLID principles in C# projects.
- Learned SQL and relational database basics.

PROJECTS

Kesitly — Creator Campaign Marketplace — *Next.js, Node.js, PostgreSQL* 2025 – 2026

- Co-founder and product lead (3-person team). Designed the creator–brand marketplace and the service that turns YouTube, TikTok and Instagram views into CPM-based payouts, with bot-inflation detection.
- Designed the payout flow on iyzico's marketplace infrastructure; set up GitHub Actions CI and Docker deployment. Launched; development paused.

Yaşam Çarkı — Life-Simulation Browser Game — *JavaScript, Node.js* Oct 2026 – Present

- Developing a turn-based life-sim played in the browser (monthly choices, dice checks, event deck); improving it based on playtester feedback.

Biriz — Prayer Times App — *Flutter, Firebase* Dec 2025 – Present

- Shipped and maintain a prayer-times app on Google Play; 100% of its ad revenue is donated to Gaza relief.
- Automated official prayer times and daily content with GitHub Actions; added Crashlytics monitoring, notifications and shareable verse cards behind a clean, minimalist UI.

Charmla — Game Marketing Data Tool — *Python, SQLite, GitHub Actions* Sep 2026 – Present

- Daily data pipeline that tracks 453 Turkish gaming YouTube channels and 62,000+ videos, and detects which game each video covers with 88.8% measured precision.
- Turns the data into "which creators should play your game" shortlists for indie studios; reached 100+ studios through outbound email.

AWARDS & COMPETITIONS

Gemini Prompt Arena (nationwide competition on effective AI use, Türkiye) — Top 40, still in competition (2026)
Ankara Catan Tournament — 3rd place (2026)
Teknofest UAV Competition — Finalist (2021); autonomous flight algorithms and telemetry integration
Teknofest Datathon (Kaggle) — ML models for e-commerce search relevance (2025)
TÜBİTAK Science Competition — Medal (2019) · Arı Schools Nationwide Math Olympiad — Bronze (2019)

LEADERSHIP & ACTIVITIES

Keçiören Science High School — lead organizer of the chess tournament; organizer and host of the debate competition (2022)
GSB Vision Camp (Ministry of Youth and Sports) — participant (2026) · Volunteering — Turkish Red Crescent, Gökyüzü Foundation

SKILLS & INTERESTS

Languages: JavaScript, Python, Dart, Java, C#, SQL
Frameworks & Tools: Node.js, Next.js, Flutter, Firebase, PostgreSQL, Git, GitHub Actions, Docker, Linux
AI-first development: Claude Code (agentic coding), Gemini and other LLM APIs, LLM content pipelines with automated validators
Spoken: Turkish (native), English (B2)
Hobbies: Board games (Catan, competitive play), chess, piano, karate, motorsport
